*Lectures on Metaphysics 1949-50 Jan 02 2021 Space, Time and the Categories presents a unique record of personal influence and inspiration over three generations of philosophers in Australia, England and Scotland. This work is a vitally important text in the history of the development of realist philosophy in Australian universities. With an introduction by emeritus professor D.M. Armstrong whose own student notes are the basis for the text used, this book brings together three of the major figures in the history of Australian philosophy.*

*Lectures on Negative Dialectics Dec 21 2019* This volume comprises one of the key lecture courses leading up to the publication in 1966 of Adorno's major work, *Negative Dialectics*. These lectures focus on developing the concepts critical to the introductory section of that book. They show Adorno as an embattled philosopher defining his own methodology among the prevailing trends of the time. As a critical theorist, he repudiated the worn-out Marxist stereotypes still dominant in the Soviet bloc – he specifically addresses his remarks to students who had escaped from the East in the period leading up to the building of the Berlin Wall in 1961. Influenced as he was by the empirical schools of thought he had encountered in the United States, he nevertheless continued to resist what he saw as their surrender to scientific and mathematical abstraction. However, their influence was potent enough to prevent him from reverting to the traditional idealisms still prevalent in Germany, or to their latest manifestations in the shape of the new ontology of Heidegger and his disciples. Instead, he attempts to define, perhaps more simply and fully than in the final published version, a 'negative', i.e. critical, approach to philosophy. Permeating the whole book is Adorno's sense of the overwhelming power of totalizing, dominating systems in the post-Auschwitz world. Intellectual negativity, therefore, commits him to the stubborn defence of individuals – both facts and people – who stubbornly refuse to become integrated into 'the administered world'. These lectures reveal Adorno to be a lively and engaging lecturer. He makes serious demands on his listeners but always manages to enliven his arguments with observations on philosophers and writers such as Proust and Brecht and comments on current events. Heavy intellectual artillery is combined with a concern for his students'

progress.

*Festschrift für Theodor Heinsius zum 65. Geburtstag am 25. September 1991 Jun 07 2021*

*David Hilbert's Lectures on the Foundations of Geometry 1891–1902 Mar 16 2022 This volume contains six sets of notes for lectures on the foundations of geometry held by Hilbert in the period 1891-1902. It also reprints the first edition of Hilbert's celebrated Grundlagen der Geometrie of 1899, together with the important additions which appeared first in the French translation of 1900. The lectures document the emergence of a new approach to foundational study and contain many reflections and investigations which never found their way into print.*

*Financial Strategies And Topics In Finance: Selected Public Lectures Of Professor Harold Bierman, Jr From 1960-2015 Dec 01 2020 Financial Strategies and Topics in Finance is a collection of*

*Professor Emeritus Harold Bierman, Jr.'s public lectures on corporate finance, given on behalf of the Johnson School of Business, Cornell University, from 1960 to 2015. By explaining complex financial strategies in a simplified manner, Professor Bierman makes corporate finance accessible to the non-expert reader as well. This collection of lectures covers highly relevant topics with financial insights and implications, that are very important to business managers and individual investors. Complex business decisions are simplified, allowing the logic of the decision process to become readily apparent. As Professor Bierman writes, "A good business education will build on the basic financial tool of the time value of money and the net present value calculation. The lectures presented in this book are consistent with good present value calculations." Contents: Ten Money Makers Ten Financial Positions Famous Strategies The Sustainable Growth Rate What does a School of Management Teach? *Lectures in Magnetohydrodynamics Nov 24 2022*

*Magnetohydrodynamics, or MHD, is a theoretical way of describing the statics and dynamics of electrically conducting fluids. The most important of these fluids occurring in both nature and the laboratory are ionized gases, called plasmas. These have the simultaneous properties of conducting electricity and being electrically charge neutral on almost all length scales. The study of these gases is called plasma physics. MHD is the poor cousin of plasma physics. It is the simplest theory of plasma dynamics. In most introductory courses, it is usually afforded a short chapter or lecture at most: Alfvén waves, the kink mode, and that is it. (Now, on to Landau damping!) In advanced plasma courses, such as those dealing with waves or kinetic theory, it is given an even more cursory treatment, a brief mention on the way to things more profound and interesting. (It is just MHD! Besides, real plasma physicists do kinetic theory!) Nonetheless, MHD is an indispensable tool in all applications of plasma physics.*

*Lectures on Political Theory 1941-45 Oct 31 2020 Delivered during the years of heightened national security of World War II*

*these lectures present Anderson's views on the major questions in political theory in relation to the major influences upon his own early education: modern Idealism and Marxism. In place of a simplistic contrast between individual and state Anderson insisted upon the complex interplay of movements, institutions and traditions. His modernist, realist project drew upon the major theorists of conflict, struggle and cyclic historical movement: Heraclitus, Vico and Sorel.*

*Lecture on National Character Oct 11 2021*

*David Hilbert's Lectures on the Foundations of Physics 1915-1927 Aug 09 2021 These documents do nothing less than bear witness to one of the most dramatic changes in the foundations of science. The book has three sections that cover general relativity, epistemological issues, and quantum mechanics. This fascinating work will be a vital text for historians and philosophers of physics, as well as researchers in related physical theories.*

*Lectures on Random Lozenge Tilings Dec 13 2021 Over the past 25 years, there has been an explosion of interest in the area of random tilings. The first book devoted to the topic, this timely text describes the mathematical theory of tilings. It starts from the most basic questions (which planar domains are tileable?), before discussing advanced topics about the local structure of very large random tessellations. The author explains each feature of random tilings of large domains, discussing several different points of view and leading on to open problems in the field. The book is based on upper-division courses taught to a variety of students but it also serves as a self-contained introduction to the subject. Test your understanding with the exercises provided and discover connections to a wide variety of research areas in mathematics, theoretical physics, and computer science, such as conformal invariance, determinantal point processes, Gibbs measures, high-dimensional random sampling, symmetric functions, and*

*Lectures on the Theory of Ethics (1812) Aug 29 2020 Lectures from the late period of Fichte's career, never before available in English. Translated here for the first time into English, this text furnishes a new window into the final phase of Fichte's career. Delivered in the summer of 1812 at the newly founded University of Berlin, Fichte's lectures on ethics explore some of the key concepts and issues in his evolving system of radical idealism. Addressing moral theory, the theory of education, the philosophy of history, and the philosophy of religion, Fichte engages both directly and indirectly with some of his most important contemporaries and philosophical rivals, including Kant, Schelling, and Hegel. Benjamin D. Crowe's translation includes extensive*

*annotations and a German-English glossary. His introduction situates the text systematically, historically, and institutionally within an era of cultural ferment and intellectual experimentation, and includes a bibliography of recent scholarship on Fichte's moral theory and on the final period of his career.*

*The Freemason's Treasury. Fifty-two Short Lectures on the Theory and Practice of Symbolical Masonry, Etc* Jul 20 2022  
*David Hilbert's Lectures on the Foundations of Arithmetic and Logic 1917-1933* Feb 21 2020 The core of Volume 3 consists of lecture notes for seven sets of lectures Hilbert gave (often in collaboration with Bernays) on the foundations of mathematics between 1917 and 1926. These texts make possible for the first time a detailed reconstruction of the rapid development of Hilbert's foundational thought during this period, and show the increasing dominance of the metamathematical perspective in his logical work: the emergence of modern mathematical logic; the explicit raising of questions of completeness, consistency and decidability for logical systems; the investigation of the relative strengths of various logical calculi; the birth and evolution of proof theory, and the parallel emergence of Hilbert's finitist standpoint. The lecture notes are accompanied by numerous supplementary documents, both published and unpublished, including a complete version of Bernays's Habilitationsschrift of 1918, the text of the first edition of

*Hilbert and Ackermann's Grundzüge der theoretischen Logik (1928), and several shorter lectures by Hilbert from the later 1920s. These documents, which provide the background to Hilbert and Bernays's monumental Grundlagen der Mathematik (1934, 1938), are essential for understanding the development of modern mathematical logic, and for reconstructing the interactions between Hilbert, Bernays, Brouwer, and Weyl in the philosophy of mathematics.*
