Numerous new colour illustrations appear in this edition, and a large number have been

replaced or upgraded using high quality transparencies for digital imaging. "The fourth edition of Histology for Pathologists was published in 2012 and, as before, it is again reasonable to ask if "normal" has changed enough in the ensuing 6 years to justify a new edition. The answer, of course, is that normal has not changed at all (evolution is indeed a slow process!) but our perception of normal continues to change and improve. In particular, we have developed many new immunohistochemical markers, and the ever-growing spectrum of immunohistochemical expression in normal tissues provides insights into pathologic processes arising from or differentiating toward these tissues. We also continue to recognize new variations of normal that cause diagnostic confusion and touch on the interface between normal and disease. Accordingly, this new edition brings incremental but valuable improvements in our perception of human histology"--Provided by publisher. Entertaining and practical, this new edition of Basic Pathology is a straightforward introduction to pathology and the mechanisms of disease. It puts pathology into its historical, scientific and clinical context for all medical, dental and nursing students and other health professionals. Basic Pathology has been brought fully up-to-date in this new edition, and once again covers four main themes: What is a Disease, Defence Against Disease, Circulatory Disorders, and Disorders of Cell Growth; highlighting key mechanisms and their interplay in producing symptoms, signs and disease. With new illustrations to demonstrate key points and facilitate retention, the book also retains the much-praised clinical scenarios, historical anecdotes, and key facts boxes. This text provides the most current tools and up-to-date information on the morphological approach and the most current use of ancillary techniques in the diagnosis and treatment of malignant tumors. The work is divided by sub specialty areas so that the reader can easily obtain the information desired. Features of histopathological lesions are presented in each area, as well as an up-to-date use of the different immunohistochemical stains and molecular biology features, when applicable, which are commonly used to

determine treatment modalities. All sub specialty sections are written by sub specialty pathologists with experience in tumor pathology and work in a cancer center. Each chapter is richly illustrated and properly referenced. *Oncological Surgical Pathology* will be of use not only to pathologists (including pathology residents and fellows), but also to oncological surgeons, oncologists and interventional radiologists. Haschek and Rousseaux's *Handbook of Toxicologic Pathology*, recognized by many as the most authoritative single source of information in the field of toxicologic pathology, has been extensively updated to continue its comprehensive and timely coverage. The f

edition has been expanded to five separate volumes due to an explosion of information in this field requiring new and updated chapters. Completely revised with a number of new chapters, Volume 3, "Environmental Toxicologic Pathology and Major Toxicant Classes," covers the toxicologic pathology of major classes of environmental toxicants. The five volumes in this work round out the depth and breadth of coverage. Volume 1, Principles and the Practice of Toxicologic Pathology, covers the practice of toxicologic pathology in three parts: Principles of Toxicologic Pathology, Methods in Toxicologic Pathology, and the Practice of Toxicologic Pathology. Volume 2 encompasses "Toxicologic Pathology in Safety Assessment" and the application of toxicologic pathology in developing specific product classes, principles of data interpretation for safety assessment. Volumes 4 and 5 provide detailed broad treatment of "Target Organ Toxicity", emphasizing the comparative and correlative aspects of normal biology and toxicant-induced dysfunction, principal methods for toxicologic pathology evaluation, and major mechanisms of toxicity. These volumes comprise the most authoritative reference on toxicologic pathology for pathologists, toxicologists, research scientists, and regulators studying and making decisions on drugs, biologics, medical devices, and other chemicals, including agrochemicals and environmental contaminants. Each volume is being published separately. A strong grounding in basic histology is essential for all pathologists. However, there had always been a gap between histology and pathology in which histologic information specifically for the pathologist was often lacking. Histology for Pathologists deals with the microscopic features of normal human tissues, from the perspective of the surgical pathologist. This is the first text that uses human (vs. animal) tissues for the histology. It is the primary reference in the literature for information on normal histology, and, as such, is essential for all clinical pathologists. Written by pathologists for pathologists, the new edition updates the pathologist's understanding of normal histology up to date with the incremental advances made

last five years. The 3rd edition has become a "classic" purchased by virtually all residents beginning their pathology training, as well as pathologists in practice. The 4th edition builds on that substantial foundation. The table of contents remains essentially the same with the exception of some changes in authorship.
