**Vols. for 1932- include a separately paged section of abstracts (1948-Mar. 1954 called Engineering abstracts. Section 3. Shipbuilding and marine engineering, v. 11-17, no. 3; Apr. 1954- called Marine engineering and shipbuilding abstracts, v. 17, no. 4- Gradually evolving from the masted steam frigates of the mid-nineteenth century, the first modern cruiser is not easy to define, but for the sake of this book the starting point is taken to be Iris and Mercury of 1875. They were the RN's first steel-built warships; were designed primarily to be steamed rather than sailed; and formed the basis of a line of succeeding cruiser classes. The story ends with the last armoured cruisers, which were succeeded by the first battlecruisers (originally called armoured cruisers), and with the last Third Class Cruisers (Topaze class), all conceived before 1906. Coverage, therefore, dovetails precisely with Friedman's**

previous book on British cruisers, although this one also includes the wartime experience of the earlier ships. The two central themes are cruisers for the fleet and cruisers for overseas operations, including (but not limited to) trade protection. The distant-waters aspect covers the belted cruisers, which were nearly capital ships, intended to deal with foreign second-class battleships in the Far East. The main enemies contemplated during this period were France and Russia, and the book includes British assessments of their strength and intentions, with judgements as to how accurate those assessments were. As would be expected of Friedman, the book is deeply researched, original in its analysis, and full of striking insights — another major contribution to the history of British warships. This book covers the latest global technical initiatives in the rapidly progressing area of gasoline direct injection (GDI), spark-ignited gasoline engines and examines the contribution of each process and sub-system to the efficiency of the overall system. Including discussions, data, and figures from many technical papers and proceedings that are not available in the English language, Automotive Gasoline Direct Injection Systems will prove to be an invaluable desk reference for any GDI subject or direct-injection subsystem that is being developed

worldwide. This book evaluates the development of the Rhodesian Air Force during the Second Chimurenga or Bush War (1966-1980). Airpower in irregular conflict is effective at the tactical level because guerrilla warfare is not a purely military conflict. The Rhodesian Air Force was deployed in a war-winning versus a supporting role as a result of the shortage of manpower to deal with insurgency, and almost all units of the Rhodesian Security Forces depended on its tactical effectiveness. Technical challenges faced by the Air Force, combined with the rate of guerrilla infiltration and the misuse of airpower to bomb guerrilla bases in neighboring countries largely negated the success of airpower. This book examines the problems in the field of energy and related areas (including chemistry, transport, aerospace, construction, metallurgy and engineering) that Ukrainian scientists are currently investigating. The research presented focuses on ensuring the operational reliability, durability and safety of energy equipment, as well as the development of control, diagnostics and monitoring systems in the energy sector. Further, the book explores the ecological consequences of energy facilities , particularly environmental pollution in large cities and industrial areas. Written mainly by representatives of the

**starts with a presentation of the diversity of translations and an overview of the translation-localisation process. The second section describes the translation profession and the translators markets. The third section considers the process of becoming a translator, from the moment people find out whether they have the required qualities to the moment when they set up shop or find a job, with special emphasis on how to find and hold on to clients, avoiding basic mistakes. The fourth section concentrates on the vital professional issues of costs, rates, deadlines, time to market, productivity, ethics, standards, qualification, certification, and professional recognition. The fifth section is devoted to the developments that have provoked ongoing changes in the profession and industry, such as ICT, and the impact of industrialisation, internationalisation, and globalisation. The final section is devoted to the major issues involved in translator training. A glossary is provided, together with a list of Websites for further browsing.
