*Fundamentals of Corporate Finance May 19 2022* "This book is more than a collection of ideas, equations, and chapters. It has an important integrating theme—that of value creation. This theme, which is carried throughout the book, provides a framework that helps students understand the relations between the various concepts covered in the book and makes it easier for them to learn these concepts. The concept of value creation is the most fundamental notion in corporate finance. It is in stockholders' best interests for value maximization to be at the heart of the financial decisions made within the firm. Thus, it is critical that students be able to analyze and make business decisions with a focus on value creation. The concept of value creation is introduced in the first chapter of the book and is further developed and applied throughout the remaining chapters. The theme of value creation is operationalized through the net present value (NPV) concept. Once students grasp the fundamental idea that financial decision makers should only choose courses of action whose benefits exceed their costs, analysis and decision making using the NPV concept becomes second nature. By helping students better understand the economic rationale for a decision from the outset, rather than initially focusing on computational skills, our text keeps students focused on the true purpose of the calculations and the decision at hand"--

*A Matter Of Facts: The Insider's Guide To Quizzing Sep 11 2021 Marcus Berkman is a competitive obsessive but where he was very bad at cricket (see RAIN MEN) he's a brilliantly knowledgeable nerd and a great success at pub quizzes. He's possibly the only man in Britain whom Nick Hornby is jealous of - because his team beat Hornby's in a pub quiz and went on to win the EVENING STANDARD knockout tournament. This hilarious book will do for quiz culture - from Mastermind to Fifteen to One to the quiz in your local - what LOST IN MUSIC did for bad rock bands. Thousands of people take part in quizzes every week answering questions such as who won the League Cup in 1972 (Stoke City beat Chelsea 3-2) and which of Henry VIII's wives was both a widow and a virgin when she married him (Catherine of Aragon)? Funny, informative, original: this book has all the answers - including the one to question six.*

*Encounters of Body and Soul in Contemporary Religious Practices Apr 25 2020 Social scientists and philosophers confronted with religious phenomena have always been challenged to find a proper way to describe the spiritual experiences of the social group they were studying. The influence of the Cartesian dualism of body and mind (or soul) led to a distinction between non-material, spiritual experiences (i.e., related to the soul) and physical, mechanical experiences (i.e., related to the body). However, recent developments in medical science on the one hand and challenges to universalist conceptions of belief and spirituality on the other have resulted in "body" and "soul" losing the reassuring solid contours they had in the past. Yet, in "Western culture," the body-soul duality is alive, not least in academic and media discourses. This volume pursues the ongoing debates and discusses the importance of the body and how it is perceived in contemporary religious faith: what happens when "body" and "soul" are un-separated entities? Is it possible, even for anthropologists and ethnographers, to escape from "natural dualism"? The contributors here present research in novel empirical contexts, the benefits and limits of the old dichotomy are discussed, and new theoretical strategies proposed.*

*The Market for Retirement Financial Advice Apr 06 2021* The market for retirement financial advice has never been more important and yet more in flux. The long-term shift away from traditional defined benefit pensions toward defined contribution personal accounts requires all of us to be more sophisticated today than ever before. However, the landscape for financial advice is changing all over the world, with new rules and regulations transforming the financial advice profession. This volume explores the market for retirement financial advice, to explain what financial advisors do and how to measure performance and impact. Who are these professionals and what standards must they abide by? How do they make money and what are their incentives? How can one protect clients from bad advice, and what is good advice? Does advice alone effect changes in personal habits? Answering these questions, along with new technology that will decrease the delivery costs of advice, will play a transformative role in helping more households receive the quality financial advice that they need. Accordingly, this volume illuminates the market and regulatory challenges so as to enhance consumer, plan sponsor, and regulator decisions.

*Can Boundedly Rational Agents Make Optimal Decisions? A Natural Experiment Mar 05 2021* The television game show *The Price Is Right* is used as a laboratory to test consistency of suboptimal behavior in an environment with substantial economic incentives. On the show, contestants compete sequentially in two closely related games. We document that contestants who use transparently suboptimal strategies in the objectively easier game use the optimal strategy almost all of the time in the game that is much more difficult to solve. Further, there is no consistency in the mistakes that are made in the two games. One cannot predict, conditional on play in one game, whether play in the other game will be optimal. The results have implications for the consistency of behaviorally based economic theory that relies on evidence derived in a laboratory setting.

*Assessing Asset Pricing Models Using Revealed Preference Nov 01 2020 We propose a new method of testing asset pricing models that relies on using quantities rather than simply prices or returns. We use the capital flows into and out of mutual funds to infer which risk model investors use. We derive a simple test statistic that allows us to infer, from a set of candidate models, the model that is closest to the model that investors use in*

making their capital allocation decisions. Using our method, we assess the performance of the most commonly used asset pricing models in the literature.
